FUEL CELL FLOODING DETECTION

Detailed Action

1. The amendments filed on March 24, 2010 and April 16, 2010 were received. Applicants have amended claim 1.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Stephanie D. Jones of Harness, Dickey & Pierce P.L.C. on April 29, 2010.

The application has been amended as follows:

In claim 1, lines 8-9, after "controller" delete "having executable" and replace it with "is configured to execute".

Claim Rejections - 35 USC § 102/103

4. The rejection of claims 1 and 4 under 35 U.S.C. 102(b) as being anticipated by DiPierro Bosco et al. (US 6,103,409) is withdrawn because claim 1 was amended.

The rejection of claims 1 and 4 under 35 U.S.C. 103(a) as being unpatentable over DiPierro Bosco et al. (US 6,103,40) in view of Eryurek et al. (US 6,539,267) is withdrawn because claim 1 was amended.

Reasons for Allowance

5. Claims 1 and 4 are allowed.

The following is an examiner's statement of reasons for allowance: The invention of the independent claim 1 recites a fuel cell stack having a fuel cell with a flow field in fluid communication with its inlet and outlet; a vaporized water source in fluid communication with the fuel cell inlet; and, a differential pressure transducer repeatedly measuring a differential pressure across the fuel cell's flow field during its operation. The set of differential pressure signals measured by the transducer is collected by a computer. The computer includes a controller configured to execute logic for determining a root-mean-square value from only the collection of differential pressure signals, and control circuitry for controlling the vaporized water source in response to that root-mean-square value, where the stack attains a steady-state in less than about 100 seconds at a sampling of about 10 Hz or greater. The closest prior art of record, DiPierro Bosco et al. and Eryurek et al., do not teach the limitations as recited in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
